

Project 2

Novel Feature:

I chose to add the option to download the data and/or the graph of the currently opened tab. I thought it would be sweet to be able to save snapshots of data/images and compare them weeks later with the most up to date information. Also, this was not something we had ever done before so I appreciated the challenge of 1. Making the buttons appear, and 2. Making the buttons download the correct data/image based on where the user was in the application. When I was getting down to the finer details at the end of my entire project, I actually used this feature to take a peek at my data frames because they were giving me trouble. So, not only was it a bonus feature for users, but for me as the developer as well.

Server:

I personally think my app is a little messy and there is always room for improvement but I'd be fine with having it hosted and working with you on that if mine is chosen.
